

# BRIDGE PROGRAM

The bridge program is an **8-week preparatory pathway** covering foundational topics in Python and AWS. Learners are expected to engage with self-paced learning material during the week and attend live classes, scheduled mostly over weekends.

To successfully complete the bridge program, learners must complete all prescribed self-paced learning content, attempt all required quizzes, and maintain at least **75% attendance** in the live classes.

Upon successful completion of the bridge program, learners will be required to submit a self-assessment declaration confirming that they are adequately prepared to pursue the **Professional Certificate in Gen AI and Agentic AI**. Following this, learners will be considered for admission to the next available batch of the program, subject to batch availability and at the discretion of the institute.
